Subject: National Grid - Uxbridge Moor: upcoming investigation works

Good afternoon

I would like to update you regarding our proposals for a new substation near Iver, known as Uxbridge Moor.

As we have previously shared, our planning application was submitted and registered in February, and can be viewed on the Buckinghamshire Council planning portal using the reference number PL/24/0449/FA.

Following this submission, we have had further conversations with council officers about the application and next steps. They have asked us to undertake a number of surveys, including archeological investigations across the proposed site, and we are also taking this opportunity to carry out some further geotechnical groundwork surveys at the same time.

As a result, we would like to make you aware that there will be groundworks taking place on the access road to the quarry, land at Mansfield Farm, and across the wider site over the coming weeks – starting from 20th May. You may see workers and equipment operating during the anticipated hours of 8am to 6pm. We will aim to keep any disruption to a minimum.

If any items of interest are identified by the archeological survey, the Archaeology Service may request that further works are carried out to preserve them within the development. Therefore, the full timescale of the work will depend upon the results of this investigation.

Any decision on the planning application will take place after the work is complete and the results are analysed. We will provide updates on this when we have more information.

Please do let us know if you have any questions.

On behalf of National Grid
